

AUTOMOTIVE

Just like any other ASIAN country, primary feature of every Indian road has been two-wheelers, i.e., bicycles, motorcycles, mopeds and now scooters. It is still an aspiration for majority of the population in the tier 3 and below towns, to own a two-wheeler and showcase their success.

According to a study by *Research and Markets*, the conventional two-wheeler market in India is expected to grow at an annual growth rate of 7.33% and reach a sales volume of 24.89 Mn units by 2024, from 21.19 Mn in 2019. However, with the electric two-wheelers becoming the talk of the town, these numbers could significantly go up.

Since 2020, the electric two-wheelers market segment is slowly beginning to diversify. In FY19, over 7.6 Lakh (0.76 Mn) electric vehicles were sold globally, which was primarily dominated by two-wheelers (16.4%) and three-wheelers (83%), respectively. The government is walking the extra mile by pushing the electric vehicle adoption in the country, where it is planning to take the Indian electric vehicle market to 28 Mn units by 2030.

With this background, almost all major two-wheeler manufacturers are gearing up to reinvent their business models and supply chains aggressively to have a fair share of the emerging EV trend.

ABC Ltd. is India's second largest OEM in the two-wheeler segment which focuses essentially on motorcycle. Market leader in 150 to 250 cc segment, ABC Ltd. has products for all the customer segments. It sells 12 Mn motorcycles every year with 47% of its sales coming from exports and rest from domestic market. It has a robust network with more than 700 primary dealers and over 4000 secondary sub-dealers catering exclusively to ABC's portfolio.

ABC Ltd. has already launched one electric scooter under one of its iconic and legendry brand name, however, it is still in pilot phase and is available only in 4 metro cities on a pre-book basis.

In a quarterly board meeting, the topic of way ahead for EV came up and the board was faced with following questions:

- How can we estimate the opportunity market size of the electric two-wheelers?
- What change do you see in the consumer behavior while buying two-wheelers?

- What should be our go-to-market strategy in terms of product portfolio, pricing, distribution channel, etc.? How can the company maximize incremental volumes and minimize cannibalization through EV entry?
- What are the KPIs to monitor success?
- What are the touchpoints through which we can engage the potential customers? What is the role of digital?

With the board not reaching to any consensus on the above questions, ABC Ltd. has decided to consult you on the questions mentioned above.

Judging Criteria

- Quality of presentation
- Analytical thinking
- Creative thinking - novel idea for disruption
- Big picture thinking - ability to understand the dynamics of an industry
- Feasibility of Implementation /scale-up
- Usage of new-age Technologies
- Creativity in Delivery
